

BUSINESS RELATED DAX & FORECASTING ANALYSES

Session-8

Farha Imthiyaz,

**BSc (Hons) in Software Engineering
(Solent University, UK),**

**MS in Data Science (Reading) (NED
University of Engineering &
Technology, Karachi)**

ROAD MAP

1. Introduction
2. Sales, Business Related dax functions (Step 1- 4)
3. Forecasting Analysis (2 Analysis)
4. Home Work

INTRODUCTION

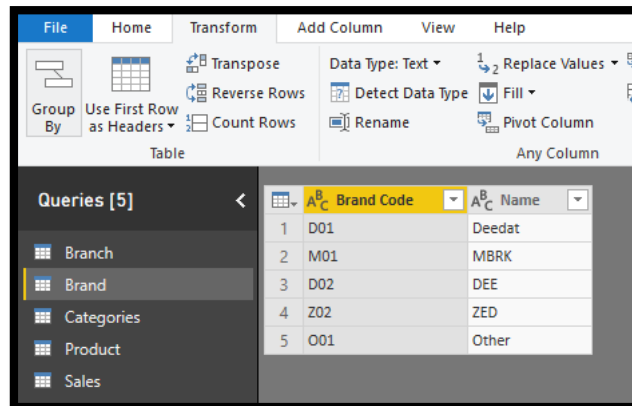

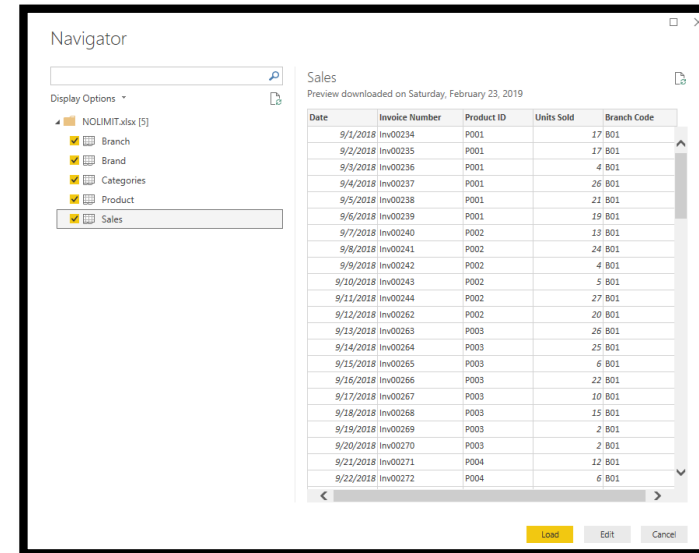

- We are using for this practical NOLIMIT data.
- Follow the following steps

SALES, BUSINESS RELATED DAX FUNCTIONS

1. IMPORT DATA FROM FILE, THEN TRANSFORM & LOAD

2. CALCULATE THE SALE IN NEW COLUMN

- To identify the sale first we need identify real selling price of each product (sale reduced by discount). Then, we have to multiply that with total units.
- In here discount is in discount percentage. So, we are multiply by discount percentage by selling price of each product. then we can get each product discount price. Then, we reduce discount from selling price. Then we get real selling price (Final Price) for each product.
- After that, we have to create new Sale Colum. for that, we have to multiply that final Price in to units sold in Sale Table.
- We have to create **Final Price** (real selling price of each product) column in **Product** Table & **Sale** Column in **Sales** Table.

A. CREATE FINAL PRICE COLUMN IN PRODUCT TABLE

1 Final Price = 'Product'[Selling Price]-'Product'[Selling Price]*'Product'[Discount]							
Product ID	Product Name	ProductCategory	Brand	Selling Price	Cost Price	Discount	Final Price
P001	STRIPE COMBO T-SHIRT	W01	O01	1000	800	0.05	950
P002	SLEEVELESS CHAMBRAY SHIRT	W02	O02	1500	1100	0.1	1350
P003	PRINTED FLAIR SLEEVE TOP	W03	O03	1800	1400	0	1800
P004	FRONT SLIT CHAMBRAY KURTA	W04	O04	1200	850	0	1200
P005	DEEDAT T-SHIRT	M01	D01	890	700	0.05	845.5
P006	DEE TALKS T-SHIRT	M02	D01	900	600	0	900
P007	MBRK SHIRT	M03	M01	2000	1450	0	2000
P008	DEEDAT TROUSER	M04	D01	2500	1800	0	2500
P009	'ZED' T-SHIRTS	K01	Z01	1700	1100	0	1700
P010	TODDLER SHOES FOR BABY GIRLS	K02	O01	1300	800	0.01	1287

3. CALCULATE THE PROFIT IN COLUMN

- To identify the Profit we have to reduce total cost price (units sold multiply by each cost price) from Sale.

1 Profit = Sales[Sale]-Sales[Units Sold]*RELATED('Product'[Cost Price])

Date	Invoice Number	Product ID	Units Sold	Branch Code	Sale	Profit
Saturday, September 1, 2018	Inv00234	P001	17	B01	16150	2550

FORECASTING ANALYSIS

In here, We will discuss 2 Analysis. They are

A. Predictive Analysis

B. What-if Analysis

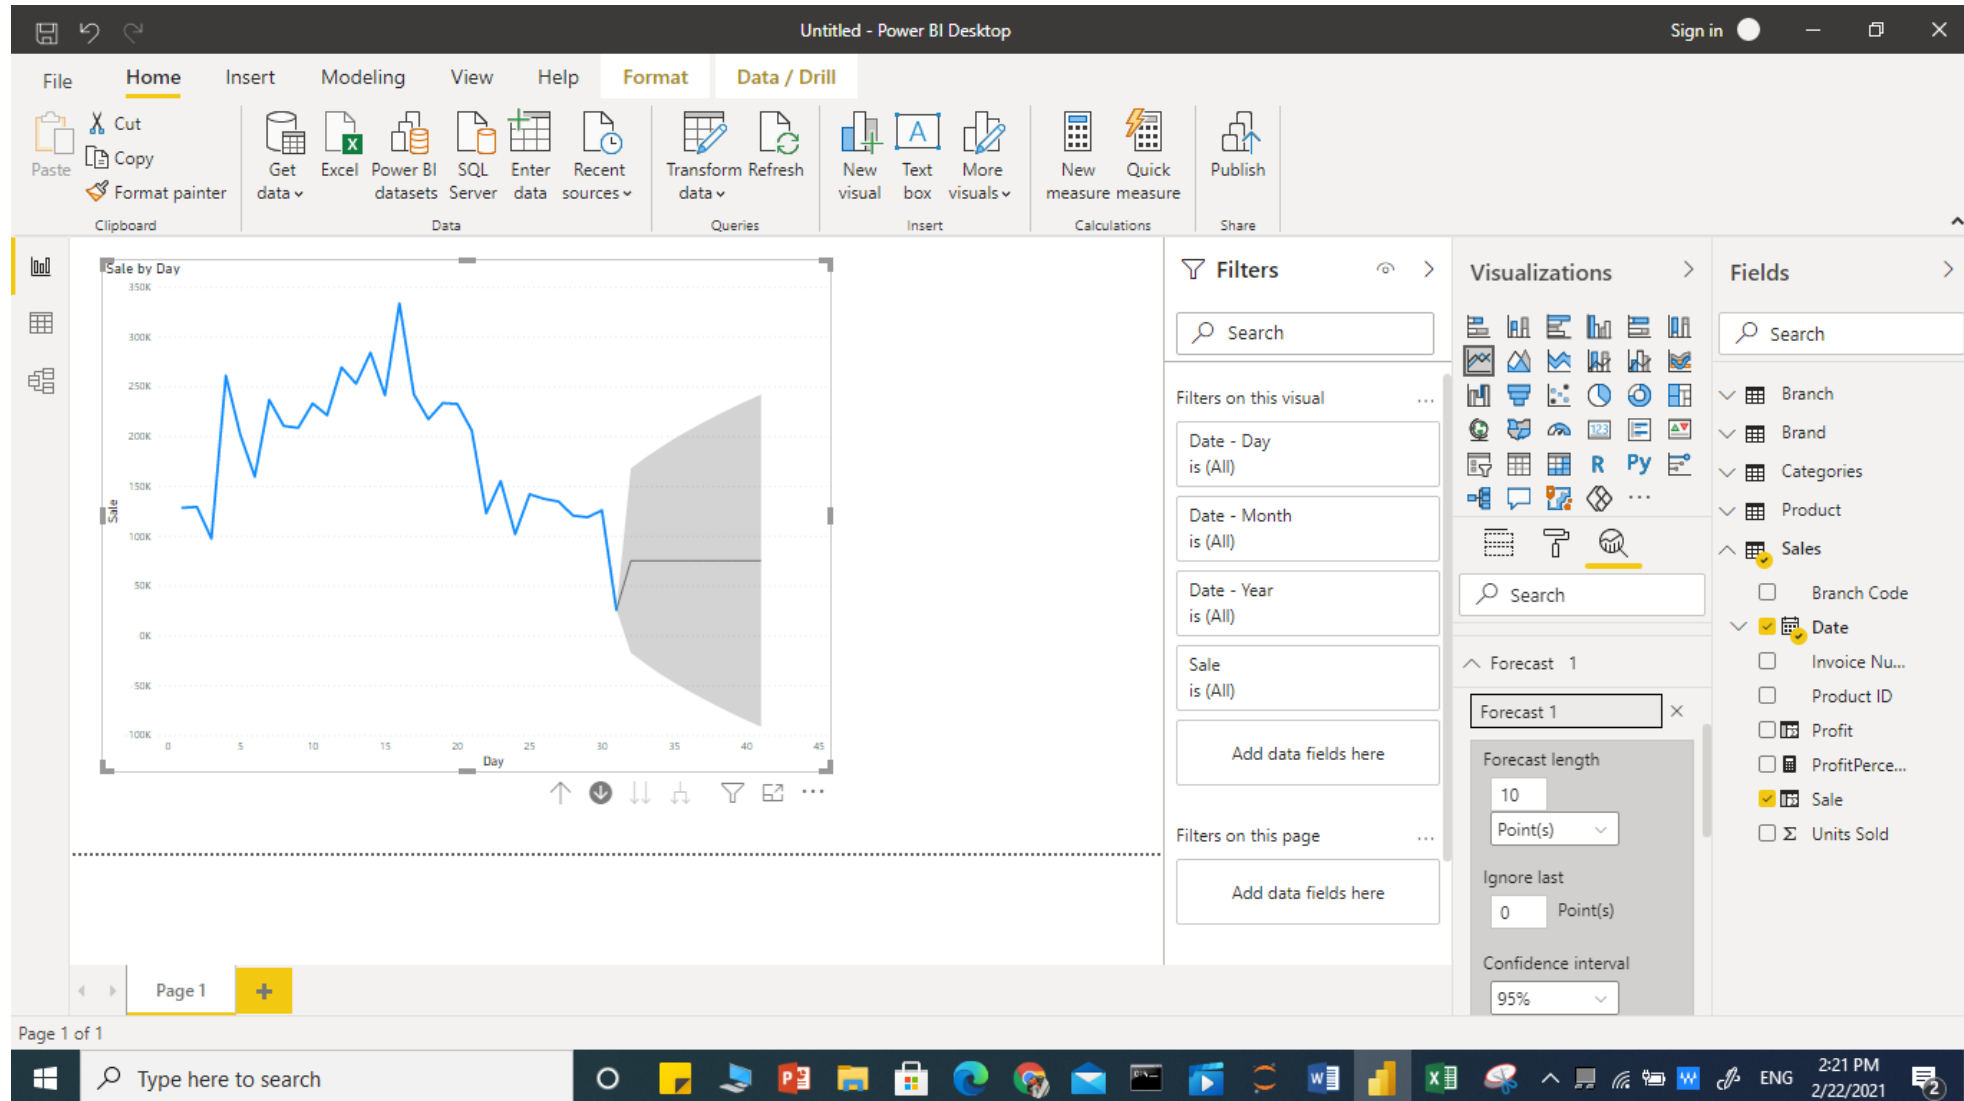

A. PREDICTIVE ANALYSIS

- Create Table with Date and Sale from Sales Table
- Change it as Line Chart

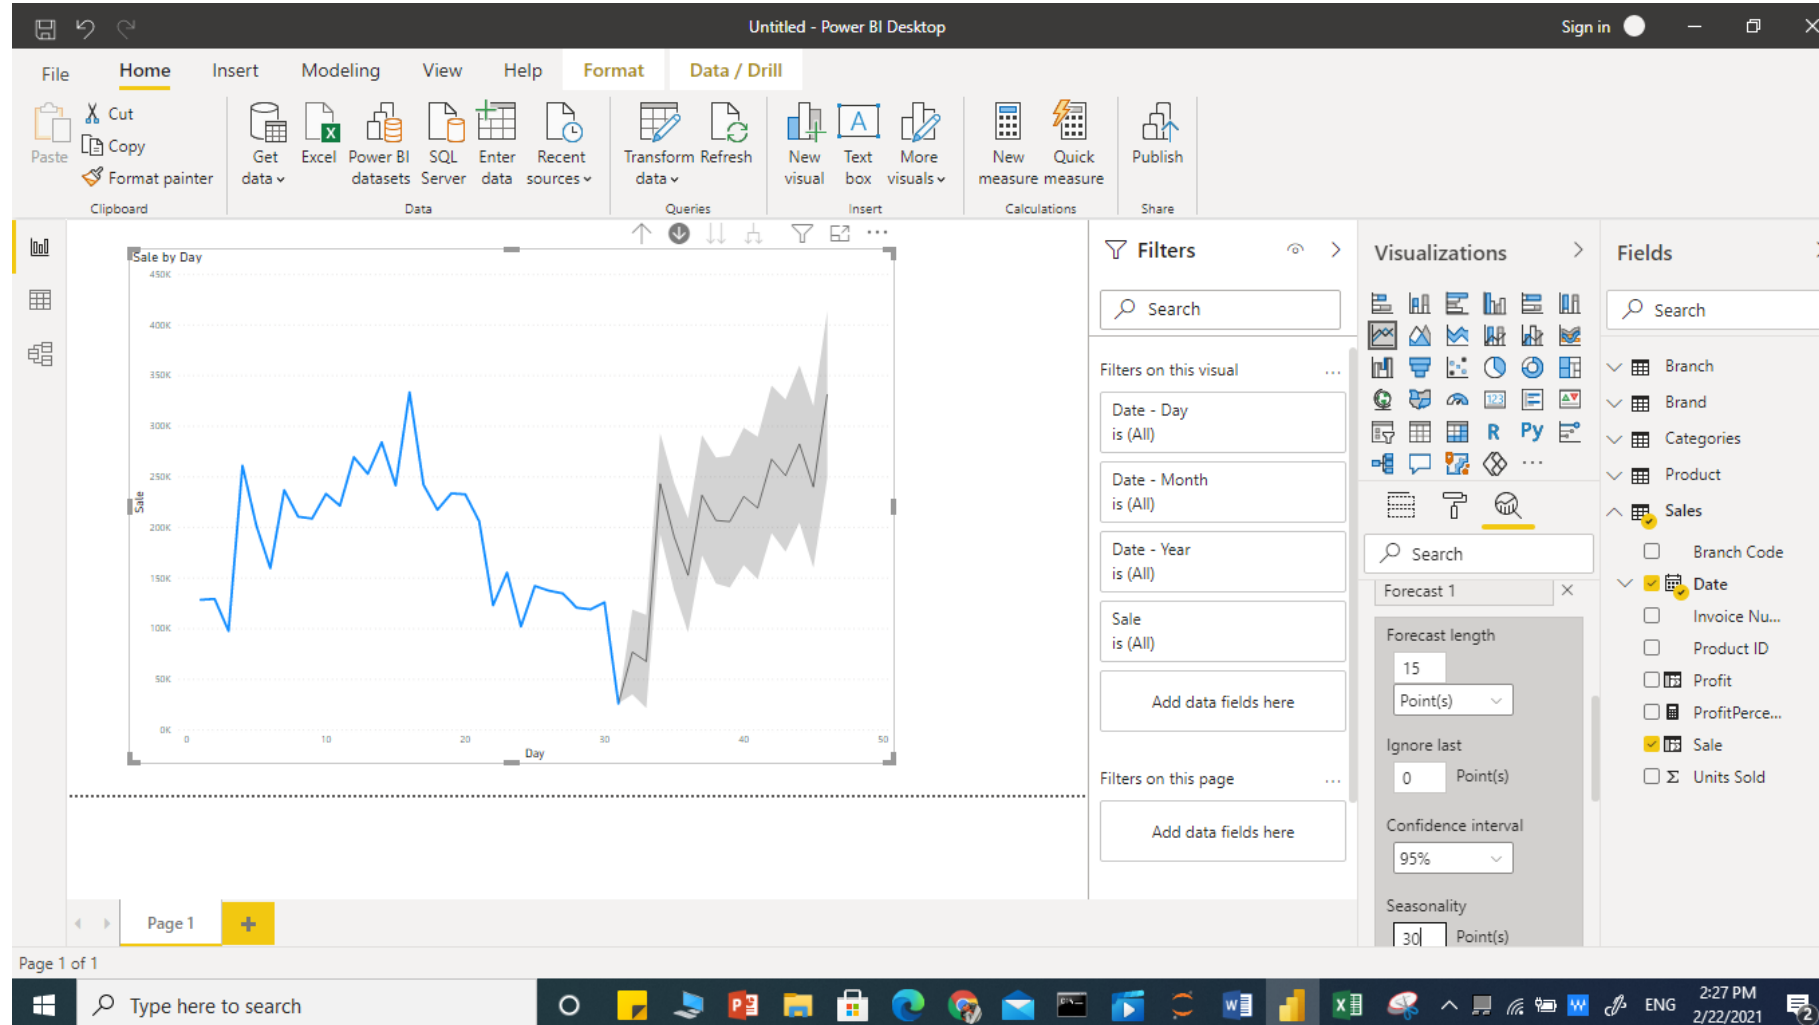

A. PREDICTIVE ANALYSIS- CONT..

- In Analytics of Line Chart we have to add forecast.

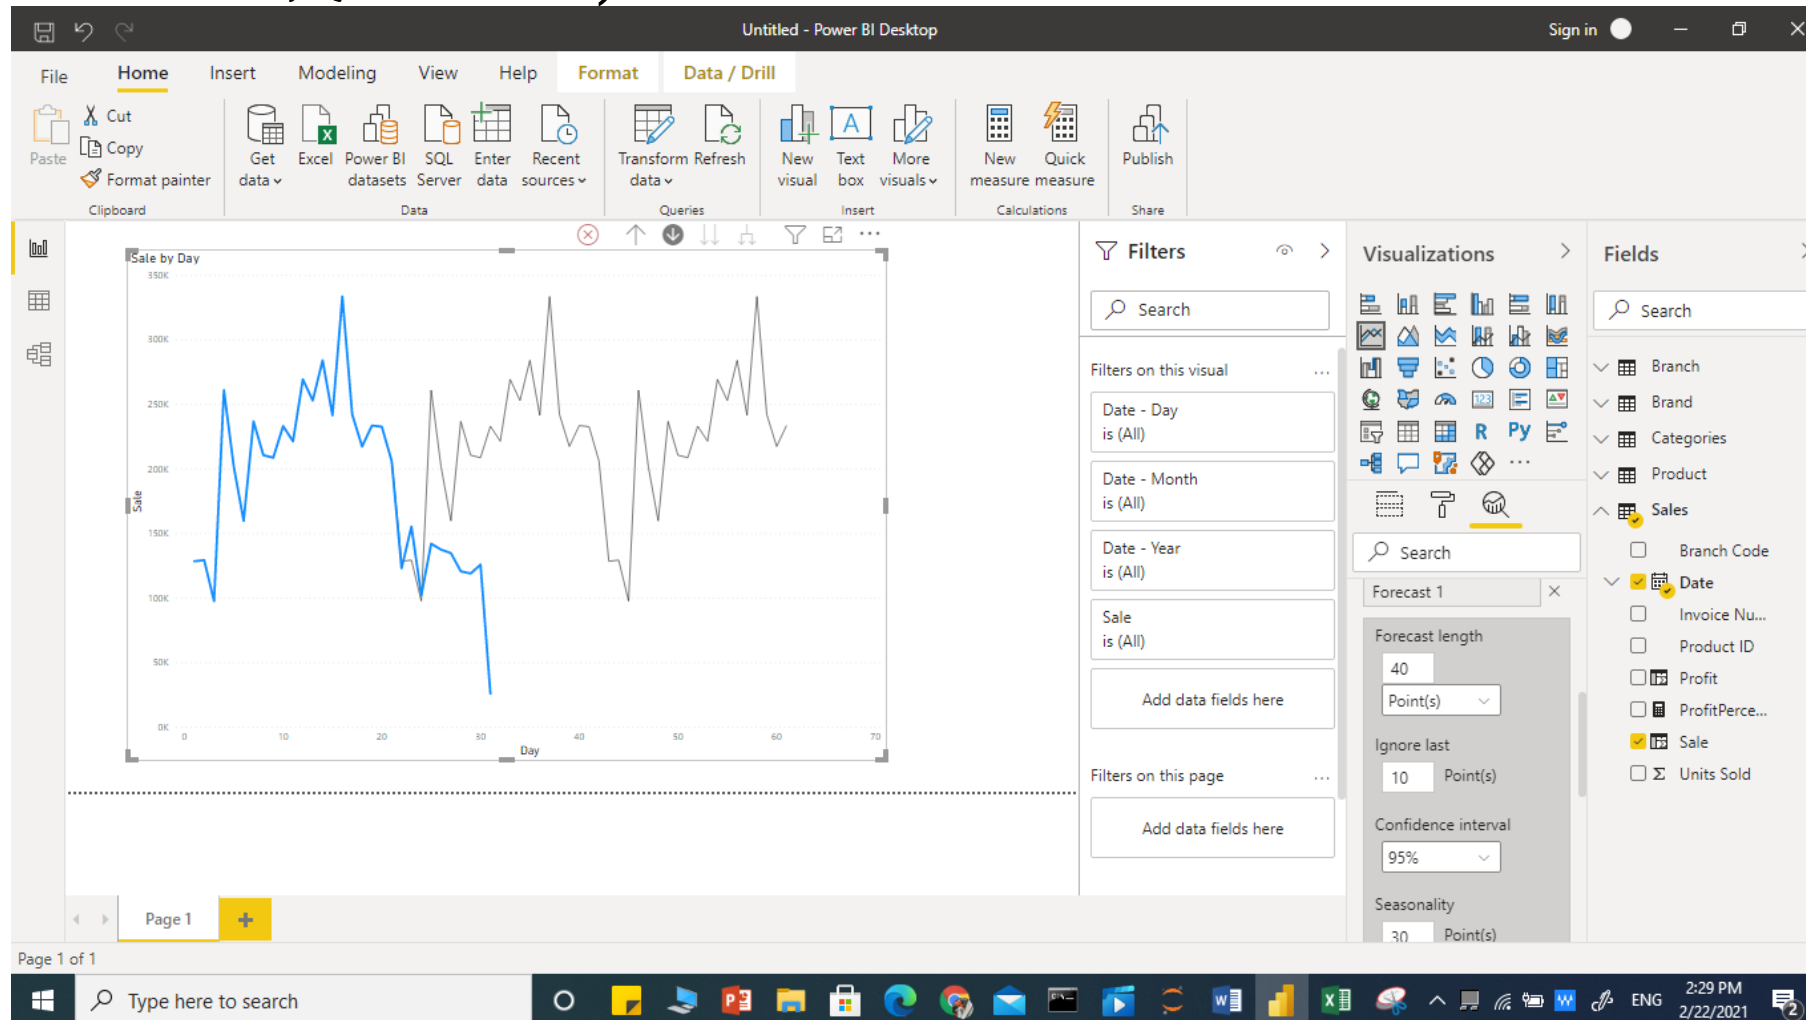

A. PREDICTIVE ANALYSIS- CONT..

- In forecast there is option call forecast length we can set the how many points we need to forecast (days, months, quarter, year)

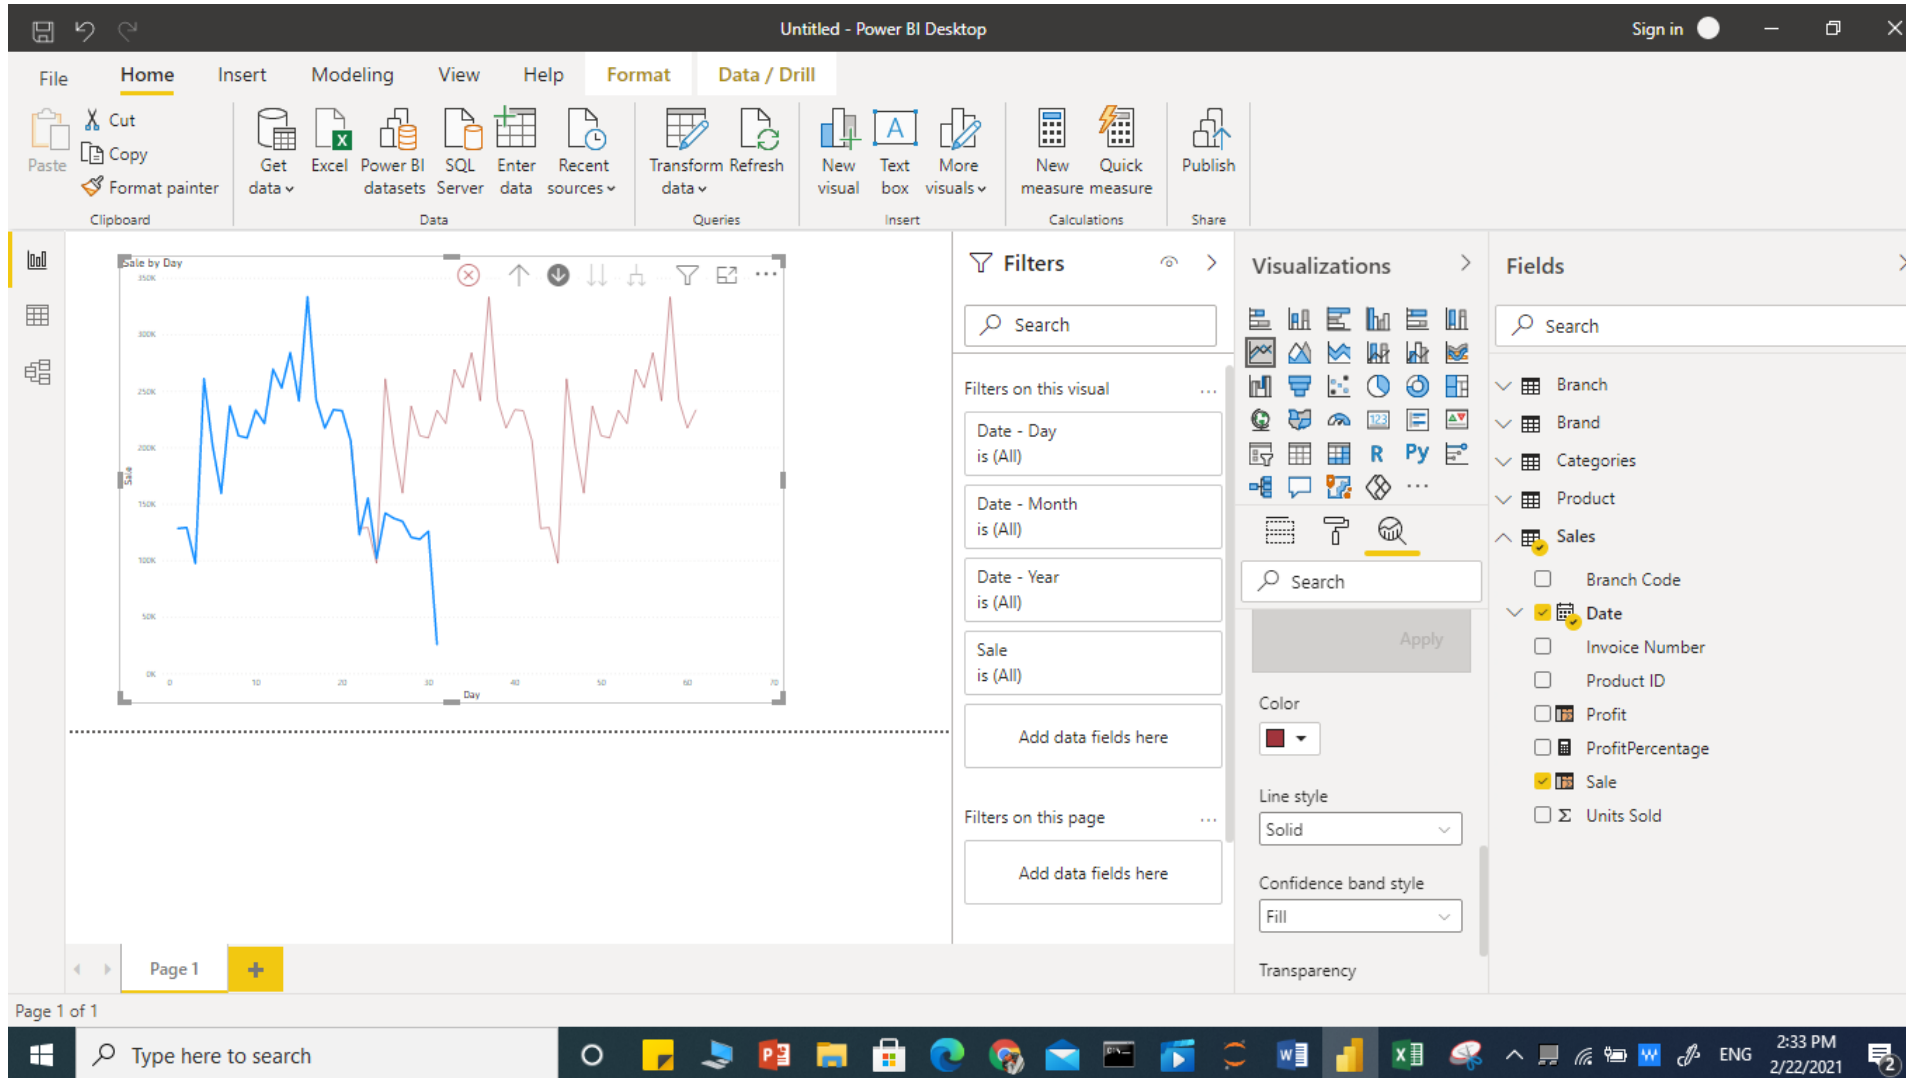

A. PREDICTIVE ANALYSIS- CONT..

- In forecast there is option call Ignore last from that we move to front ward by specific points. Also we can set confidentiality (confidence interval) and seasonality by frequency or as your wish(days→ 365, months→12, Quarter →4)

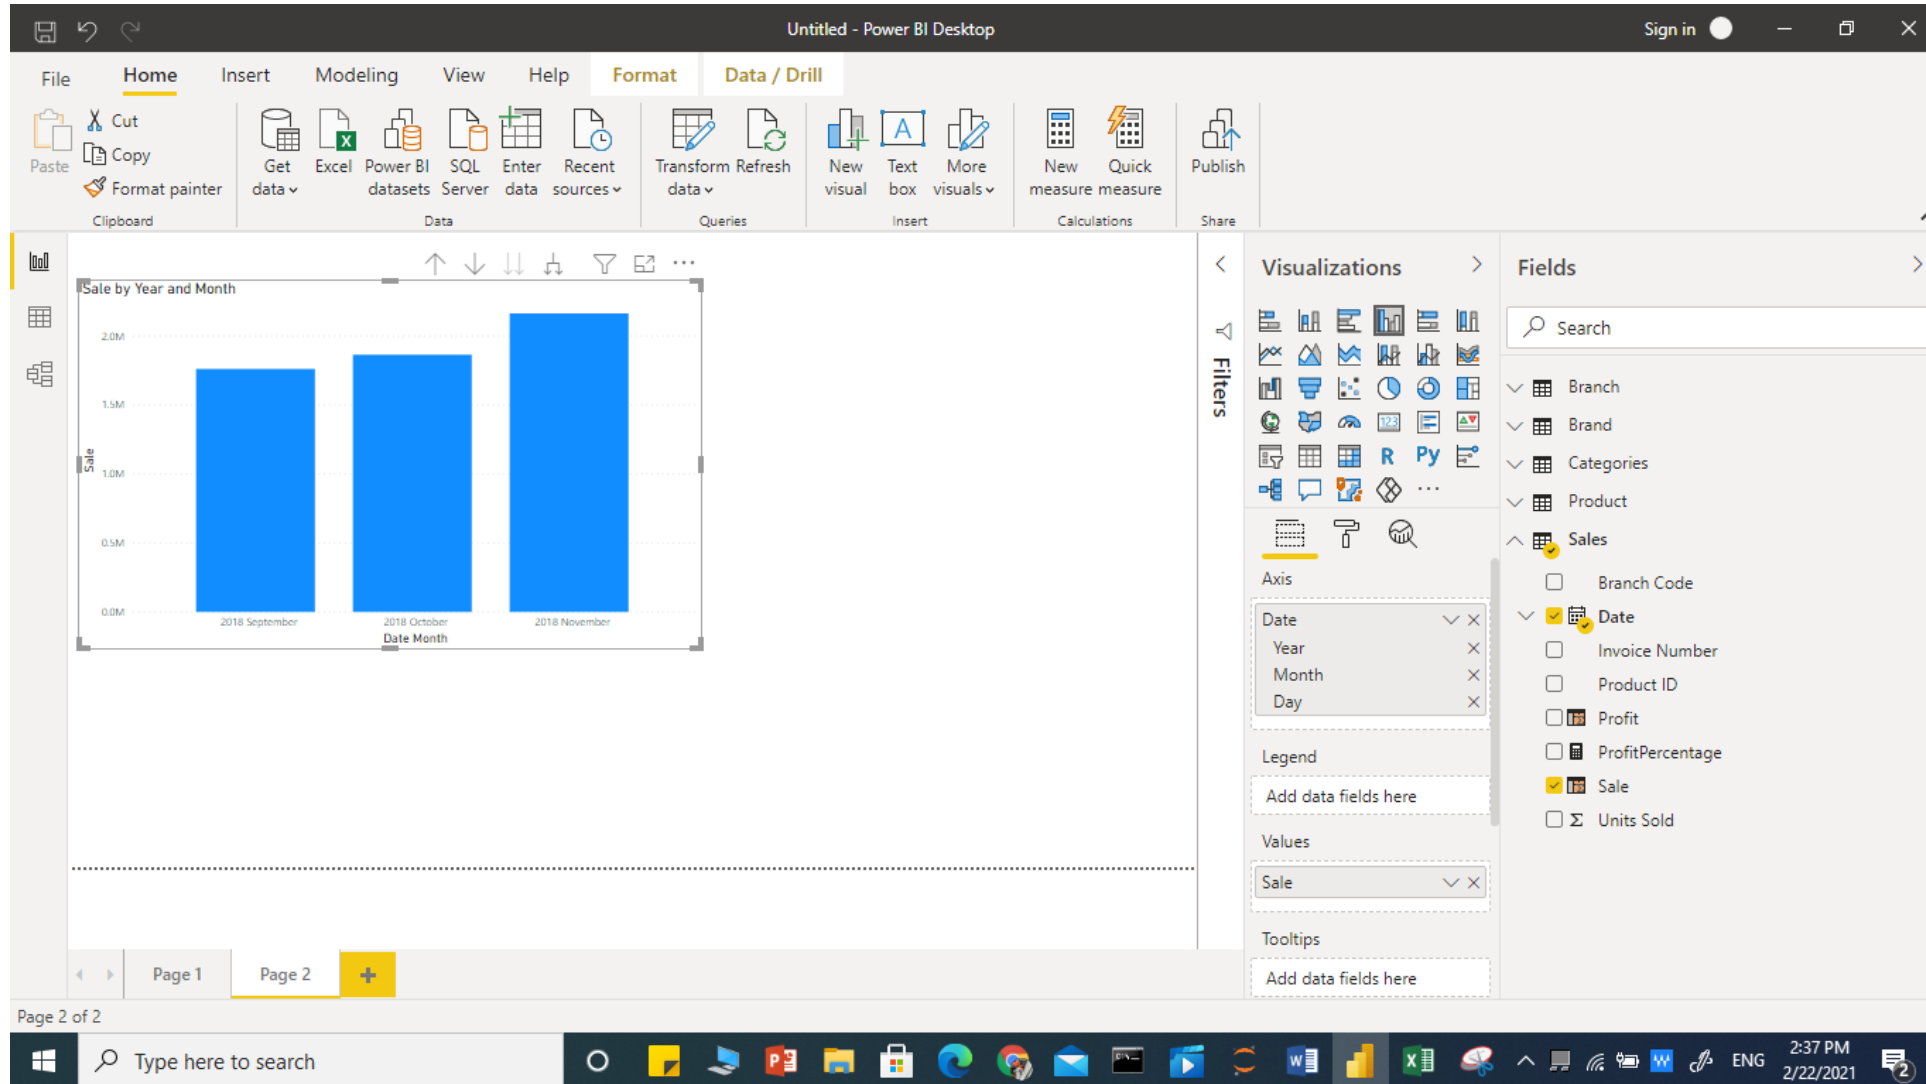

A. PREDICTIVE ANALYSIS-CONT..

- In here, we can set color and design and etc.

B. WHAT-IF ANALYSIS

- Create a Clustered column chart by date and sale from Sales Table

B. WHAT-IF ANALYSIS-CONT..

- We have to create a new Parameter (ProfitPercentage) which is What if Parameter from Modelling section. The, Select Data type, Minimum value, ,maximum value and increment value. Then, there is a slicer will be added.

The screenshot displays the Power BI Desktop interface. The 'Modeling' tab is active in the ribbon, showing options like 'New parameter', 'Manage roles', and 'What if'. A 'What-if parameter' dialog box is open, allowing the creation of a new parameter named 'ProfitPercentage'. The dialog includes fields for 'Data type' (set to 'Decimal number'), 'Minimum' (0), 'Maximum' (0.5), and 'Increment' (0.05). There is a checkbox for 'Add slicer to this page' which is checked. In the background, a bar chart titled 'Sale by Year and Month' is visible, showing sales data for 2018 September and 2018 October. The right-hand pane shows the 'Fields' list with 'Date' selected under the 'Sales' table. The bottom status bar indicates 'Page 2 of 2'.

B. WHAT-IF ANALYSIS-CONT..

- We have create a Profit measure from ProfitPercentage Value multiply by sale from Sales table(When we creating a what if parameter automatically it will create a measure, in my case ProfitPercentage Value). We have create it same ProfitPercentage Table.

B. WHAT-IF ANALYSIS-CONT..

- then, we are adding that profit in to chart values. From changing the values of the slicer we can check Profit changes.

4. HOME WORK

- Create 5 Pages Dashboard with same NOLIMIT Data.
- You have to use Predictive and What if Analysis
- You can create DAX functions & interactive Visualizations as your wish.
